

## Replacing *radiosport* Gel Ear Cushions

There is a tiny vent hole at the bottom center of each Gel Ear Cushion. Orient the cushion so these are at the bottom as the headset sits on your head. This will go to the bottom of each ear dome.

Pull the flap on the back of the Gel Ear Cushion down over the top of the Ear Dome Lip. Hold the Gel Cushion down in Place with the index finger of your left hand (for right handed users).

Now use your right index finger like a tire spoon (as in mounting a bicycle tire) to slip it in around the inside of the cushion and stretch the flap of the cushion all the way around the perimeter of the Ear Dome Lip. Though this may seem impossible at first, once mastered it only takes a few seconds.

Now you can rotate the cushion on the ear dome (it should be securely on the Ear Dome now). and orient the tiny vent hole so it is aligned with the connector on the bottom of each ear dome.

Slip the Cotton Ear Cloths over the Gel Cushions with the seam aligned with the connector on each Ear Dome.

**You're done!**
